

DOME

Cloud & Edge Services you can Trust

One-stop Shop for your trusted Cloud & Edge Journey

March, 2025

Introduction

Cloud & Edge services you can trust

dome-marketplace.eu

What is the DOME project?

- **Cloud computing** is a central element of **Europe's digital future**, offering businesses and public organisations the data processing technology needed to support their digital transformation.
- The **DOME project** aims to create "a cloud services marketplace for EU users in both the private and public sectors" as part of the European Commission's efforts to **support cloud adoption in Europe**.
- The DOME project marketplace has been developed within the framework of EU programmes such as the **Digital Europe Programme, Horizon 2020** and **Horizon Europe**. It is also based on the concepts of Gaia-X and open standards, thanks to which DOME will provide the final touch to boost the development and adoption of reliable cloud and edge services in Europe.

What is the DOME marketplace?

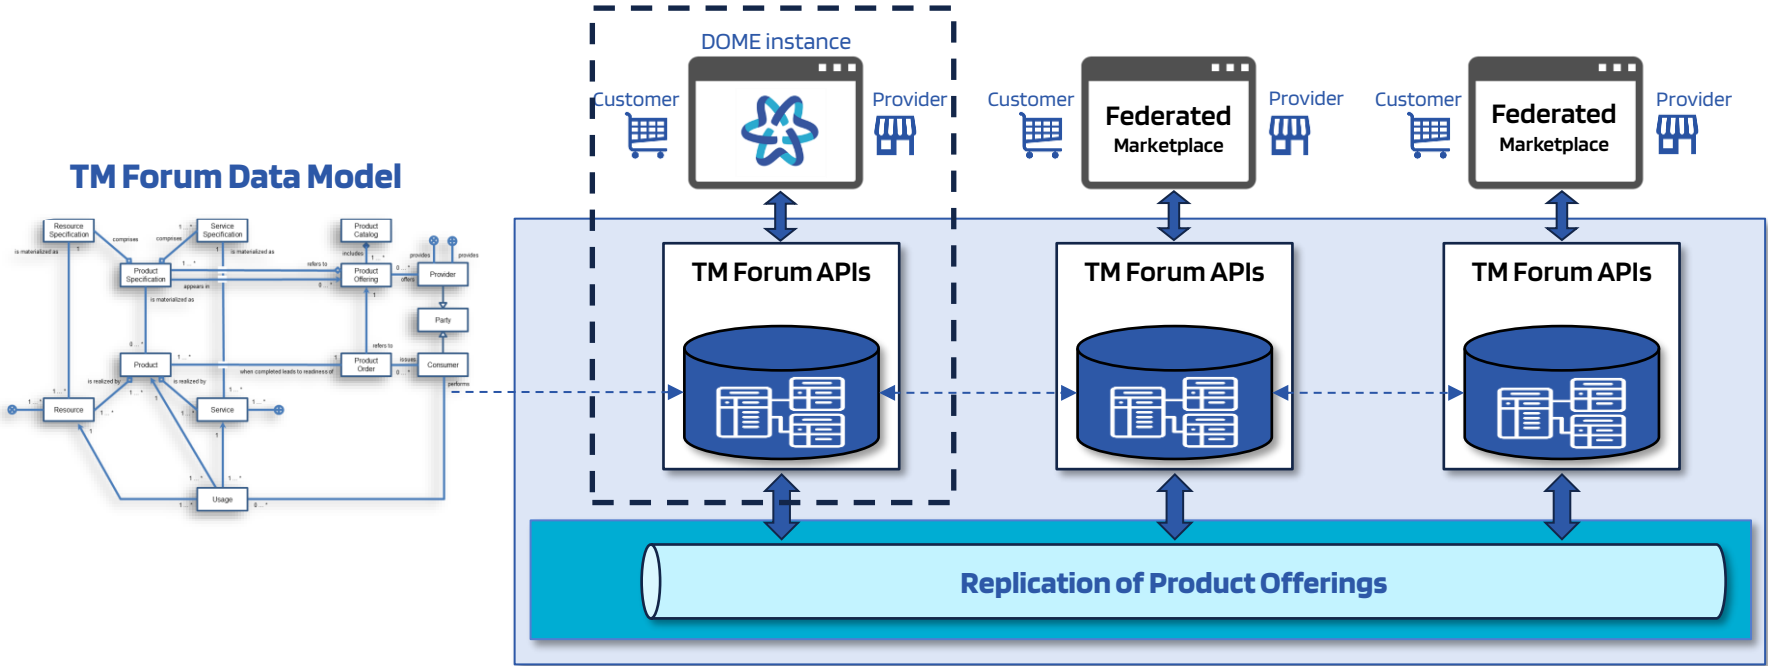

- The DOME Marketplace addresses the challenge of fragmented product offerings in Europe by **consolidating a wide range of EU-compliant Cloud & Edge Services into a single marketplace.**
- The marketplace **matches service providers' offer and customers' demand, ensures verified and comparable quality across services and products** and facilitates **simple and transparent transactions and service management.**
- The uniqueness of the marketplace is its **ability to generate and use verifiable credentials** ensuring the publication of trusted services, according to EU regulation. It enables **a standardised way to verify that services and providers are certified and trustable.**

What is the DOME marketplace?

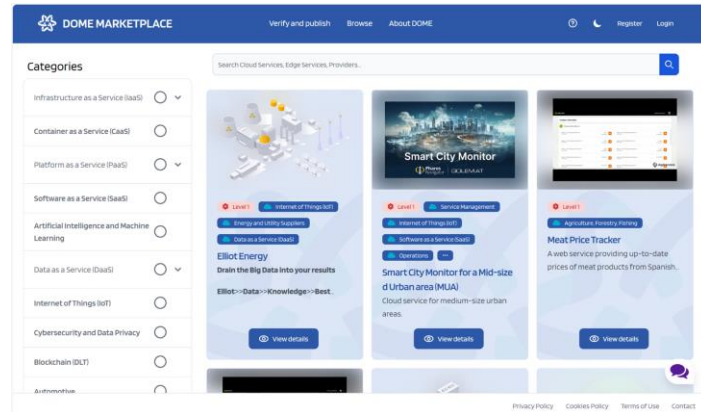

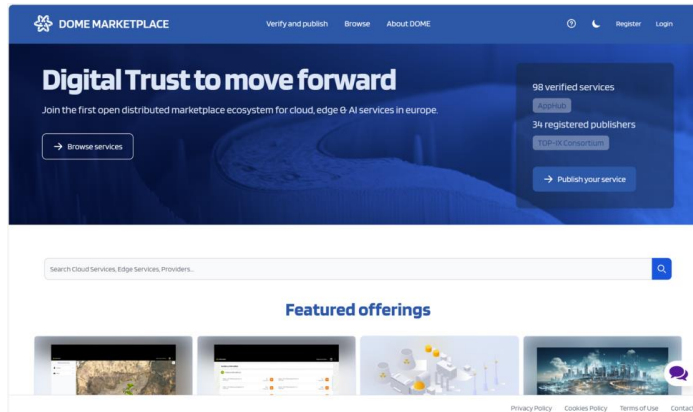

The DOME ecosystem

DOME marketplace is online

The marketplace is live and onboarding service providers: dome-marketplace.eu

DOME marketplace roadmap

The DOME business aims to create a collaborative environment where we can grow together with the platform adopters.

Q2 2024

Launch with a service catalog & trusted credentials

Q1 2025

Enable purchases directly within the platform

Enjoy early free access until JUNE 2025

Q4 2025

More premium features available - full transition to the DOME Foundation era

DOME ecosystem advantages

- ✓ More visibility, more sales
- ✓ Verified Digital Trust - Compliance
- ✓ Boost the data consumption
- ✓ Simplified Onboarding Process & Service Management
- ✓ Simplified Integration framework
- ✓ Capacity to Offer Customizable options
- ✓ Free access for early adopters!

DOME overcomes those challenges by deploying a

Federated Marketplace Ecosystem

How to get started

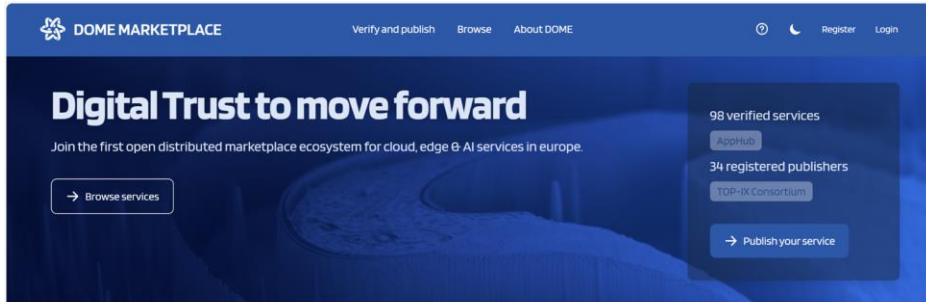

Cloud & Edge services you can trust

dome-marketplace.eu

Follow these simple steps

1 Check your DOME eligibility and start your onboarding

2 Submit & verify your documentation

3 Sign the DOME terms and conditions

4 Obtain your LEAR credentials

Start your DOME-verified journey and gain access to the European Market effortlessly!

The DOME Marketplace onboarding process

The DOME Marketplace commitment is to provide **trustable services**.

This trust is built on an onboarding validation service addressing 2 levels of compliance:

- 1. Company compliance:** To be part of the catalogue, a provider must be a recognized EU legal entity authorized to sell cloud services in EU member states. The entity must designate a reference LEAR to act on behalf of the company in activities under the DOME framework.
- 2. Product/Offering compliance:** Any product or service seeking inclusion in the catalogue must prove compliance with the DOME reference rules. Compliance checks will be conducted annually to ensure ongoing adherence. If a product fails the compliance check, its visibility will be restricted, and current customers will be notified.

Both processes are designed to simplify activities and reduce the effort needed by the provider during initial onboarding and subsequent renewals.

The costs of the Marketplace

onboarding process

- 1 DOME Project is committed to delivering the entire platform to a new legal entity that will sustain the service after the project ends. This new legal entity must be **self-sustainable**, without any funding from members or public entities, this means we must charge a **Yearly subscription fee** to the providers that join the catalogue.
- 2 Providers joining the catalogue will be charged **an annual subscription fee of 5k€**, with **an additional 3% revenue** sharing for those generating over 100k€ in revenue through the platform.
- 3 The subscription **fee will be introduced in June 2025**, and early adopters can use the platform for free until then.
